

TrackPro - Contour II

1/32 - 1/24 Slot Car Track Cleaning System

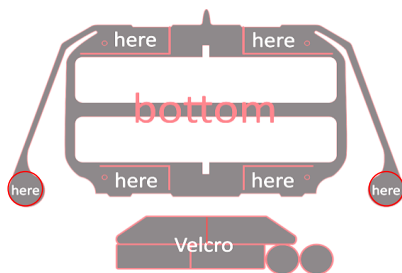

User Guide

see **Quick Start** below

Quick Start

See back for compatibility, tips and special instructions.

- 1) **Apply Velcro®**
Affix the pre-cut Velcro pieces to the bottom of the cleaner using the etched lines as guides. Assembly is now complete.

- 2) **Attach Cloth**
Place a pre-cut Swiffer® cloth centered on a track lane, then place the cleaner on top. Lightly press down on the cleaner and its side wings to ensure the cloth is well attached and the cleaner is fully slotted.
- 3) **Clean Your Track**
Place a slot car behind the cleaner then drive the slot car, pushing the cleaner around the track. After a few laps, check the cloth, flipping it over to the clean side or replacing it until your track is clean.

Performance: TrackPro Contour II will clean dust and debris from your track surface, rails and slot. In addition, the slot car used to push the cleaner around will benefit from tire conditioning of the driven tires. You'll experience improved performance of your slot cars and track!

Compatibility: Works on smooth to moderately textured 1/32 and 1/24 scale track such as Carrera®, Scalextric® Sport, Strombecker®, wood tracks and more. It will not work on rough SCX®, Ninco® or traditional Scalextric track due to their abrasive surface. Most slot cars can push the cleaner around however some vintage slot cars such as Eldon® or Strombecker® cannot, due to a lack of traction or power. Digital lane changing is not supported, requiring the cleaner to be placed on each track lane manually.

Scalextric Sport Track: If directly attached barriers interfere with the cleaner, remove the two circular Velcro pads. If you find that your slot cars struggle to push the cleaner, cut a slot in the cloth for the slot guide to go through. Slot cleaning will still occur from air turbulence that causes dust and debris from the slot to collect around the middle area of the cloth.

Tips

1. Make your own Swiffer® cleaning cloths using the cloth cutting template by tracing an outline, then use scissors to cut the cloths. Swiffer Sweeper X-Large Sweeping Cloth Refills (Unscented) can be purchased from Amazon to make up to 256 cloths per box.
2. Use both sides of the pre-cut Swiffer cloths. Cloths are machine washable, multiple times.
3. To enhance cleaning, lightly mist or dampen the Swiffer cloth with something track-safe. You may need to help the slot car until some of the moisture is drawn from the cloth so that traction is regained.
4. Switch to different slot cars to condition their driven tires for better traction. Driving aggressively can help remove dry rubber and dust from the driven tires.
5. The pin at the front of the cleaning module can be used to pierce the Swiffer cloth to help hold it. Its use is optional.
6. Periodically inspect the Velcro pieces. Adjust them if they have moved and remove cloth fibers to maximize their ability to hold Swiffer cloth.
